PRESS RELEASE

15th February 2006

Immediate Release

No *Walkover* from GT Trax

GT Trax the plastic flooring specialists are introducing a new compact flooring system ideal for temporary factory floors.

Entitled the *Walkover*, the fully interlocking flooring sections are manufactured from recycled PVC and is totally anti-slip. Each panel has a hardwearing soft PVC top and have a uniquely designed underneath which helps to avoid the accumulation of debris and dirt.

The *Walkover* is easily laid and has a maximum weight load of 750kg, although this is dependent on the surface conditions.

There are two types of *Walkover* – the standard version with an anti-slip profile and the superior version that is fitted with the anti-slip profile and 25mm drainage holes.

The *Walkover* is shock absorbent, insulating, chemical resistant, durable and very easy to clean. They are perfect for all types of temporary flooring both indoors and outside.

The *Walkover* flooring systems are manufactured in the EC and have been installed in meat and processing factories, horse stables, together with many different types of warehouses.

GT Trax is the sole UK distributor for the *Walkover* flooring system and they have a variety of types of temporary roadways, walkways and ground protection boards.
